

Wrist-Wranglin' Rigid

Picture this: some dude up in the Outer Klondikes; he just wants some peace and quiet, away from the insanity of much having anything to do with civilization. Log cabin, some maple syrup, a dog, some snow shoes, a parka, the whole Eskimo pie, so to speak.

YET ANOTHER REASON TO LIVE

**QUICK
THROTTLE**

OK, so Yukon Jack here also wants to ride. Now you figure a guy with this much of a solo streak will do things exactly as he pleases, and come springtime, he'd love noddin' more than to roll a project scooter out of the cabin and go seekin' the finer pleasures of ... but how in the name of the Northern Lights will he be able to construct his primo custom ride for the express purpose of creating the type of adrenaline surge associated with hanging off a 5,000-foot mountain top with a burning rope in your hand? Especially when

he's out in the middle of god-forsaken latitudes and longitudes?

Simple. He logs onto the Internet and goes right to www.american-made.com, and tracks down Dave Welch. "We're a mail order business," Dave explains. "We help guys build bikes over the Internet and over the phone. We also like to try out most of the products we sell ..."

And therein we discover the true meaning of this featured bike's life. Yessir, when a man feels the notion (as Dave did personally) to fit an 88-cubic-inch Twin Cam

outta the crate H-D power plant directly into a rigid frame, runnin' a 230 rear tire to see if it would work, well, let there be light! Dave was sure that the combination would relieve some weight off the front end with a certain amount of judicious throttle, and lawdy lawd, he was sho' nuff right.

A Chopper's Inc. fat plate and 1 7/8-inch motor grind fit the TC-88 snugly and snarlingly into place. The D&D stretched gas tank and a short LePera seat plate (modified by American-Made) put the "ubba" in the

hubba-hubba concerning the long lean lines of this rolling Viper cousin. Dave had wanted "that look," and that look he got, thanks to fine painting by Benny Benson and classic '50s graphics by Bart McCoy. Yeah, this scooter rocks!

Dave's use of a stock '99 Dyna wiring harness allows him to hook the bike up to factory shop sensor equipment to diagnose and dial-in any l'il ol' thang on the TC-88 engine. The hidden wiring is clean as an eagle's eyeball, and it looks just as sharp.

Speaking of looks, Dave wanted us to

mention in particular the Damon's MC license plate holder with the Kenny Boyce inlaid LED lights that double as brake lights. "The fool who can't see these is fucking blind," Dave chuckles.

With all that said, let's fast forward to the bottom line: Was the experiment, built in the name of testing combinations for future buyers, a success? "It will pull the front up at the stop light," Dave confirmed.

Ahh, don'tcha just love a happy damn ending! But why let it end here? You can give American-Made a holler at (800) 696-

2452 and play velocity scientist, too. From the four corners of our ever-evolving sphere, the freedom to ride is now just a tad sweeter and all the sweeter still with this month's Fox Hunt winner, miraculous Moira aboard this one-of-a-kind ride.

Speaking of hardbellsies and hot rides, check out our own Ms. Easyriders, the lovely Lisa, on yet another astounding American-Made wonder chopper built for the Sturgis 60th anniversary in the March issue (#104) of *In The Wind*, on sale December 5.
